RESEARCH
SUMMARY

I focus on building *trustworthy*, *scalable*, and *advanced AI systems* to address real-world challenges. My research integrates **robustness**, **automation**, **graph learning**, and **generative AI** to deliver practical, impactful solutions.

- 1. Robust and Trustworthy AI Systems:** Developing reliable AI systems that handle outliers, anomalies, and OOD data, ensuring fairness, safety, and transparency, especially in foundation models and large language models (LLMs).
- 2. Scaling AI Through Automation:** Designing automated tools for model selection, hyperparameter optimization, and architecture search, minimizing human effort. Scalable performance is achieved using GPU acceleration, tensor operations, and decentralized learning.
- 3. Graph Learning for Knowledge Discovery:** Applying graph-based models to analyze structured, interconnected data. This work spans tasks like anomaly detection, neural architecture search, and molecular learning, bridging structured knowledge with scalable AI.
- 4. Generative AI and Foundation Models in Science and Society:** Leveraging generative AI, LLMs, and foundation models to address challenges in drug discovery, political forecasting, and digital twin design, driving innovation across domains.
