Research Summary	I focus on building <i>robust</i> , <i>trustworthy</i> , and <i>scalable</i> AI systems by addressing challenges at three distinct but connected levels: from ensuring robustness and trustworthiness in AI (Principle Level), leveraging structured and generative AI methods for scientific and societal applications (Knowledge Level), to developing scalable and open-source AI systems (System Level). These efforts advance AI4Science, healthcare, finance, and political science.			
	1. Robust and Trustworthy AI (Principle): Ensuring AI systems can detect outliers, anomalies, and out-of-distribution (OOD) data to provide trust, fairness, and transparency. This principle-focused work underpins all other levels of AI research and applications.			
	□ OOD Detection□ Outlier Detection	□ Anomaly Detection□ Trustworthiness		
	2. Structured and Generative AI for Science and Applications (Knowledge): Leveraging graph-based learning to understand interconnected data, and applying generative AI methods, large language models (LLMs), and foundation models to address challenges in drug discovery, synthetic clinical trials, and political forecasting.			
	 □ Graph Learning □ Graph OOD Detection □ Graph Anomaly Detection □ LLMs 	 □ Foundation Models □ AI4Science □ Drug Discovery □ Political Forecasting 		
	3. Scalable and Open-Source AI (System): Developing efficient tools and frameworks for automated model selection, hyperparameter optimization, and large-scale anomaly detection. As the creator of PyOD (25M+ downloads, used by NASA, Tesla, etc.), I lead over 10 open-source projects, including PyGOD, TDC, and ADBench, collectively accumulating 20,000+ GitHub stars.			
	□ Automated ML□ Distributed Systems	□ ML Systems (MLSys)□ Scalability
